Kirchhain, [Date]

Application for [Position]

Dear Hiring Team,

I am applying for the position of [Position] at [Company]. I have been developing software professionally since June 2022, and I am looking for a role in which I share responsibility for a product from concept through release.

I am currently Team Lead at EdTrust and responsible for four production applications. The work runs from architecture through REST, Firebase, and real-time data to CI/CD and release. I have also built backend services with Serverpod, TypeScript, NestJS, and Express, and designed data models in PostgreSQL and MongoDB. Feedback on architecture and code is part of how I work. Alongside this, I studied Computer Software Engineering at TEK-UP University of Digital Sciences (engineering degree, 2023–2026).

I work in a structured way, take responsibility for the result, and learn new technology quickly. I live in Kirchhain and can work on site or hybrid. English is my working language. My German is at level A2, and I continue to improve it. I would be glad to present my work in a conversation.

Yours sincerely

Iheb Meftah
